

2017 SCIENTIFIC BALLOONING TECHNOLOGIES WORKSHOP

TELEMETRY OPTIONS FOR LDB PAYLOADS

Columbia Scientific Balloon Facility – Chris Field

May 16, 2017

CURRENT LOS TELEMETRY OPTIONS

- 1 Mhz bandwidth digital transmitter
 - 330 Kbit biphas encoded data
 - 740 Kbit randomized NRZ-L encoded data
 - $\approx 0.5 \text{ A @ } 28\text{V}$
- 3 Mhz bandwidth digital transmitter
 - 1 Mbit biphas encoded data
 - 2.24 Mbit randomized NRZ-L encoded data
 - $\approx 1.1 \text{ A @ } 28\text{V}$
- 6 Mhz bandwidth digital transmitter
 - 2 Mbit biphas encoded data
 - 4 Mbit randomized NRZ-L encoded data
 - $\approx 1.1 \text{ A @ } 28\text{V}$
- Analog video transmitter
 - NTSC
 - $\approx 2\text{A @ } 28\text{V}$

CURRENT TDRSS TELEMETRY OPTIONS

- Powered by CSBF
- Omni Antenna
 - 6-10 Kbps data
 - CSBF downlinks data in 2041 byte packets
- High Gain Antenna
 - 93 Kbps data
 - No packetizing

CURRENT IRIDIUM TELEMETRY OPTIONS

- Iridium SBD
 - Email based
 - Continuously available
 - Uplink commands
 - Commands are checked 1/minute
 - Downlink 255 byte science packet
 - One packet every 1 to 15 minutes (selectable)
- Iridium Dialup
 - Usage must be requested
 - Uplink commands
 - Commands received instantly
 - Downlink 255 byte science packet
 - Downlink data through “high rate” port
 - The connection is only 2400 baud
- Iridium Pilot
 - IP based system
 - Up to 134 Kbps throughput
 - Typical throughput is \approx 60 to 75Kbps (service is bursty)
 - Connect to system from anywhere in the world

FUTURE TELEMETRY OPTIONS

Low Cost TDRSS Transceiver (LCT2)

- Designed and built at WFF
- Up to 300 Kbps through current HGA (24" diameter)
- Up to 1 Mbps through new larger HGA (approx 36" diameter)
- Flown at 150 Kbps
 - Flt 667NT – FY15 Ft. Sumner
- Test flight planned for FY17 Ft. Sumner at 300 Kbps
- Science availability possibly in 2018
 - Science interface TBD

LOWER ANTENNA REQUIREMENTS

- LOS antenna hang below the gondola (minimum 1ft)
- Standard SIP configuration
 - 2 - UHF antennas
 - 1" wide X 27" long
 - Typically 24" separation
 - 2 - L-Band antennas
 - 5" diameter X 3" long
 - Typically 24" separation and away from UHF antennas
- Standard Science configuration
 - 1 - L-Band antenna for 1Mbit TM
 - 1 - L-Band antenna for Sci Video
- FAA transponder antenna
 - 5" diameter X 3" long
 - NOT USED IN ANTARCTICA

UPPER ANTENNA REQUIREMENTS

- Upper antennas need an unobstructed view of the sky; they should be the highest objects on the gondola
- Standard SIP configuration
 - 3 GPS antennas
 - 4" diameter X 1" tall
 - 3 Iridium antennas
 - 3" diameter X 7" tall
 - 2 feet separation between radiating antennas
 - TDRSS Omni
 - 7" diameter X 12" tall (mid-latitude)
 - 7" diameter X 27" tall (Antarctic)
 - 2 feet separation between radiating antennas
- TDRSS HGA
 - 24" diameter X 16" tall
 - 25 lbs
 - Requires two additional GPS antennas with as large of separation as possible (minimum 36" from any Iridium antenna)
- Iridium Pilot
 - 23" diameter X 8" tall
 - 28 lbs

SCIENCE TO SIP INTERFACE

- Two Low Rate Science ports (one per SIP flight computer):
 - RS232: Baud Rate = 1200
 - Downlink telemetry 255 Byte packet, uplink commanding
 - Extended commanding available (up to 255 bytes per transmission)
 - Commanding through both SIP flight computers is required.
 - GPS position, time, and pressure altitude can be requested.
- Two High Rate Science ports (one per SIP flight computer):
 - RS232: Baud Rate = up to 115,200 (configurable)
 - Must allow for different “effective” bit rates.
 - TDRSS – 6 kbps to 75 kbps (depending on link margin and antenna)
 - Iridium – up to 2 kbps max
- TDRSS Direct
 - RS232: Baud Rate = 115,200
 - Data Rate = 92 kbps
- IRIDIUM Pilot
 - Cat-5 Ethernet connected
 - port configurable
- Science Stack (control and TM) providing:
 - Analog and Digital input channels
 - Command outputs
 - Optically isolated and powered by Science

SCIENCE TO CSBF ROCC/OCC INTERFACE

- Two Science ports each to the LDB OCC and ROCC computers are required.
 - data port at 115,200 baud (configurable)
 - commanding port at 2400 baud
- Third port required for TDRSS HGA (TDRSS Direct Data) at OCC
 - Data port at 115,200 baud
